

ANMI (Belgium) and GMS (CA, USA) signed an exclusive distribution agreement for the supply of ANMI's products including PSMA-11 cold kits for diagnosis and management of prostate cancer in Australia, New Zealand, Taiwan and Cambodia.

Liège, Belgium and Sherman Oaks, CA - USA – November 23rd 2015

ANMI and GMS announced their collaboration for distribution of ANMI's products in Australia, New Zealand, Taiwan and Cambodia. The first commercial product is PSMA-11 cold kit for production of ⁶⁸Ga-PSMA-11, for diagnosis and management of prostate cancer. This is part of the common strategy of GMS and ANMI to be able to provide a reliable, straight forward and cost effective processes for ⁶⁸Ga tracers production and in particular PSMA-11.

Shahe Bagerdjian, Business Development & Special Projects Director of GMS commented, "GMS is committed to bringing added value to our clients as well as deliver an accelerated avenue for customers to enter the fast-growing Gallium imaging field. Most of all, we are proud to enhance the diagnostic and therapeutic services for patients in our region. GMS is happy to partner with dedicated company such as ANMI, who are focused on revolutionary products to better meet the demands of a growing industry."

Sam Voccia, CSO and Co-founder of ANMI commented, "GMS is an example of a strong based company in the radiopharmaceutical industry. Their position on the Eastern market show a real will to be a driver in the radiopharmaceutical field. It is a fantastic opportunity for ANMI to collaborate with a cutting-edge company such as GMS".

About ANMI

ANMI SA is GMP reagent supplier for radiometals labeled radiopharmaceuticals and a global service provider in the nuclear medicine field located in Liège, Belgium.

ANMI has developed innovative solutions to facilitate the synthesis of these theranostic radiopharmaceuticals and to ease their daily production in hospitals.

ANMI vision is focusing on increasing patient access to new highly specific theranostic radiopharmaceuticals through straight forward and cost effective production processes.
